www.rednatic.org

Chicos.net is a NGO from Argentina, now in Perú too, created in 1998, that works to improve the quality of life of children and teenagers.

Our approach ensures that the projects we implemented include the Information and Communication Technologies (ICTs), that enables children to access to information and quality content, a social and school inclusion, the right of speech and participation, and a safe and responsible use of ICTs.

Chicos.net, at this time, is coordinating the RedNATIC, a network that is working with topics of children, technologies and rights since 2007 with Save the Children support.

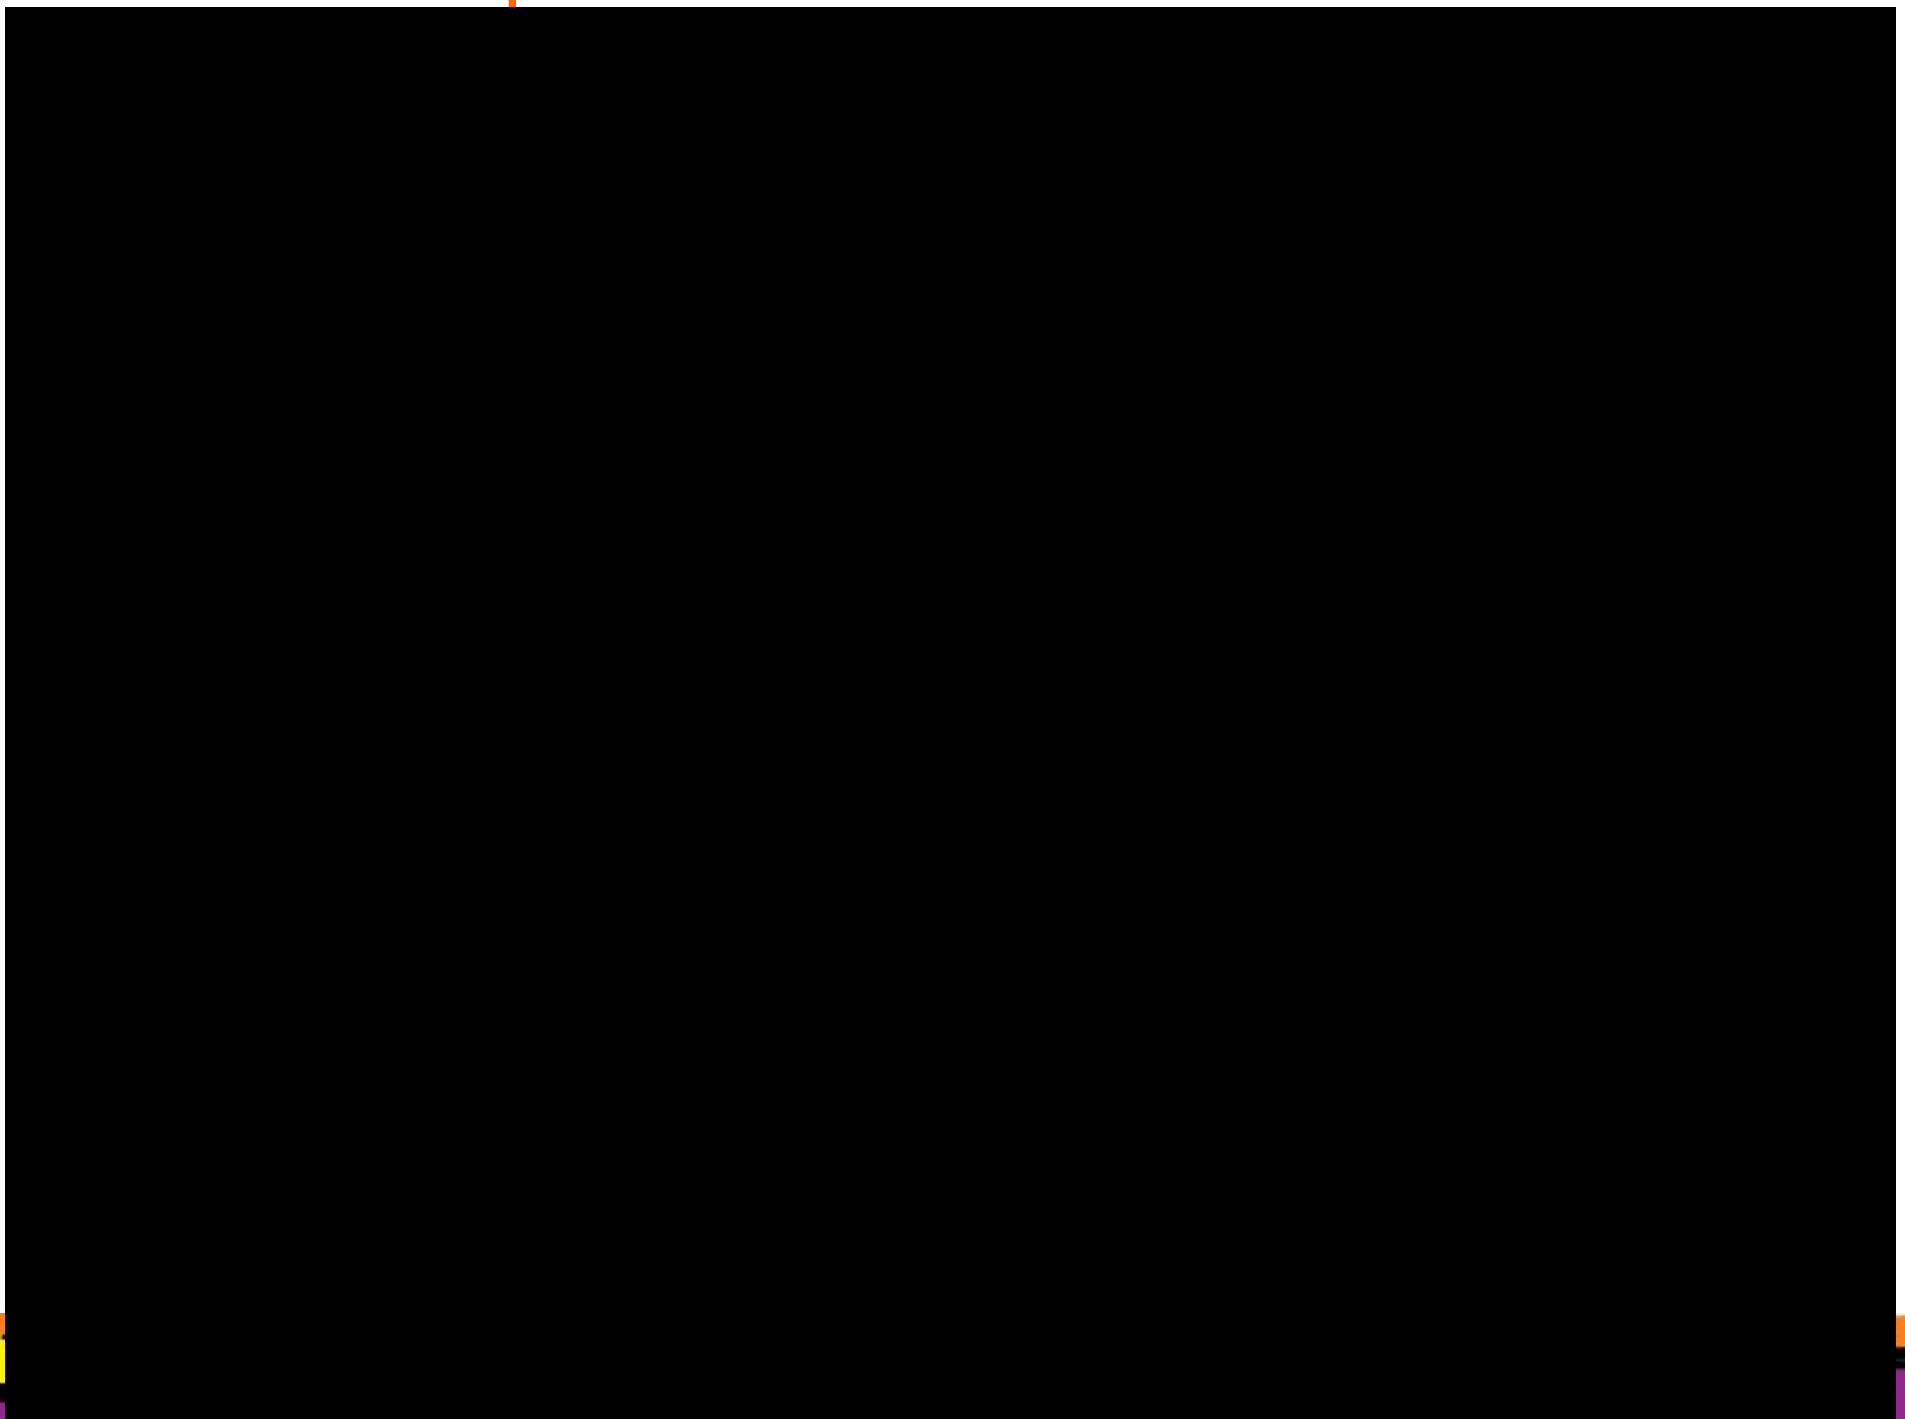
and strategies
to promote
Child Participation



Projects

Projects

“Say yes to technology”

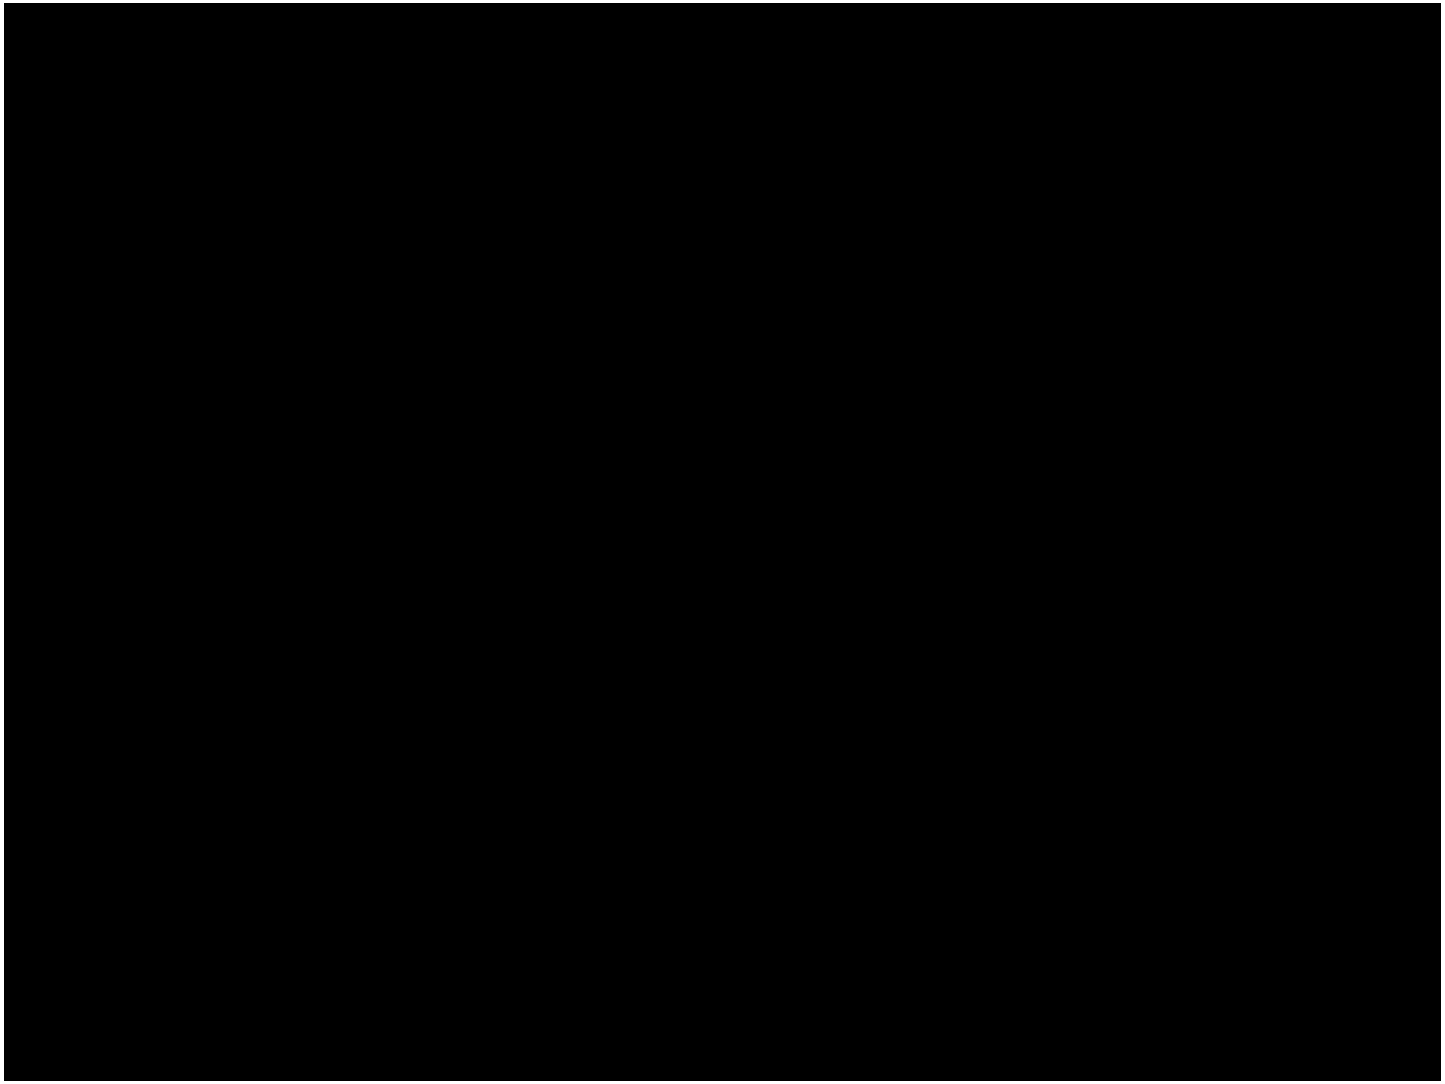
Its main goals:

- To promote critical thinking about the Internet between teenagers and for teenagers.
- To create a safe and responsible culture of the social networks and other services.

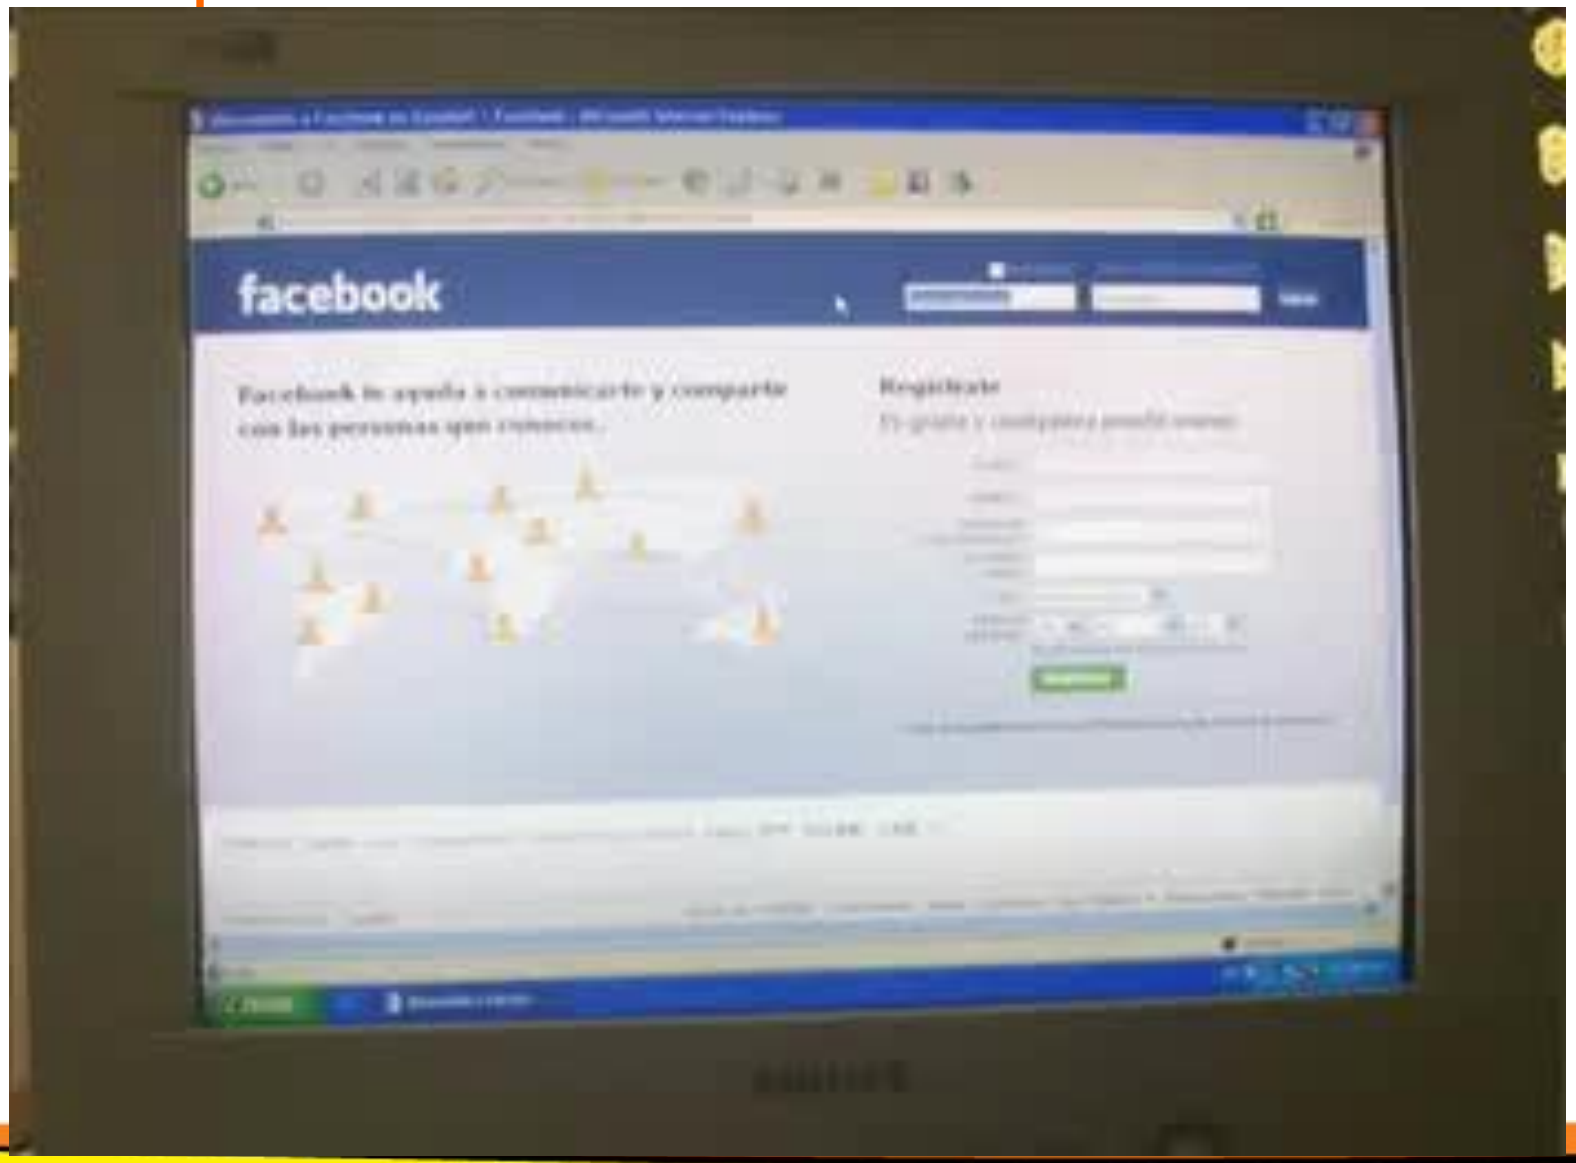
Projects

How does the project work?

It was a contest in which the teenagers had to create a small video where they could express, on the different technologies, what were their points of view, perceptions, fears and opportunities.



RED Natic



Projects

Most problematic topics worked:

- Addiction and isolation
- Ciberbullying and discrimination
- Fear to be kidnapped
- Stealing prívate images
- Stealing personal data (passwords)

Projects

Results

- 3 editions of the contest (2009-2010-2011)
- 470 videos made by Latinamerican teenagers
- 4000 teachers trained face to face and through e-learning.
- More than 10.000 teenagers are now aware of the issue.

Projects

Student Promoting Program

Projects

Student Promoting Program

- This is a multiplier program, to encourage students and teachers to be promoters of the Responsible, Safe and Productive use of the Internet and the Digital Citizenship, trough some workshops at school.

Projects

A little group of students and teachers work in a campaign to reach all the school students, teachers and families.

Projects

Projects

JUST A CLICK AWAY

Promotion strategy of the safe and responsible use of ICTs and digital citizenship for Latinamerican young people.

The strategy is based on two main courses of action:

a. The first one is a regional online campaign for raising awareness.

b. The second one is an advocacy forum for teenagers from each country.

Projects

During the forums, more than **1000 teenagers**

from 7 countries worked in workshops where they could debate on how technologies influence them.

They realized their opportunities and their risks, and could make a **MANIFIEST** with their commitment and petitions for adults who are responsible of protecting them.

¿Notaste cómo con las nuevas tecnologías, lo que hacemos tiene consecuencias instantáneas?
Mira y comparte con nuestra comunidad las experiencias buenas y malas que has tenido utilizando las tecnologías. ¡No hay mejor aprendizaje que con el ejemplo!
Ordenar por: Pais - Más recientes
Filtrar por: Lo bueno - Lo malo
Internet no es para hablar mal de otros sino para conversar y ser felices. (Juanes, 6 años)
(Luisa de Venezuela)
En Internet no se debe hablar mal de las personas porque eso los entristece,ni hacerse pasar por otros(Isabel, 8 años)
(Luisa de Venezuela)
En internet siempre hay alguien que sabe más que vos, NO digas cosas personales NO subas fotos de calidad
(Jorge de Argentina)
Con el uso de la Internet puedo aprender, jugar, comunicarme con mis familiares y amigos y compartir infinidad de cosas
(Alfredo de Colombia)
No dejar el encuentro cara a cara, por estar con el celular y en el facebook.
No debemos publicar tanta información que alguien pueda utilizar de mala manera.
(Daniela de Uruguay)

Youth Manifest

Youth Manifest

RECOMMENDATIONS AND ADVICE

- We recommend our peers not to meet up with people they know only through social websites. Also to protect their accounts.
- We recommend parents to supervise the websites their children visit.
- We recommend our friends to be careful with the pictures they upload as they don’t know what they can be used for.

Youth Manifest

COMMITMENT

- We commit not to get together with groups that support bullying on the Internet.
- We promise not to accept strangers' requests through the Internet, not to reveal our location or private information to strangers, to communicate online with our family and friends. Also, to use the Internet in an intelligent way as well as to inform if any cyber bullying situation comes up.
- We commit to denounce inappropriate content that appears on the Internet, to not produce them nor share them.

Youth Manifest

IDEAS

- There should be computers in every public school.
- Free wifi connection everywhere, including poor areas given the fact that Internet Access is a human right.
- The States should produce a legislation that controls publicity on the Internet.

Youth Manifest

REQUESTS

- We demand the authorities that our rights are respected and to provide public and private institutions with computers.
- We require help for young people to fight against cyber bullying and penalty for online offenders.

Youth Manifest

ICTs

- We suggest everyone seeing the Internet as a tool whose results depend on how we use it. Internet is not a bad thing; the bad thing is to use it in an inappropriate way. It's everyone's responsibility to promote a safe use of it.
- We have learned a lot about how ICTs can be used in an appropriate way. From now on, we accept the challenge of sharing our knowledge on the use of the ICTs with people that know less about the subject.
- Internet and social media are very important for getting to know a lot of things and get more involved with the Internet.

Challenges

- Listen the **voice of young people.**
- Involve them at projects at **all stages.**
- Understand and **constantly update our knowledge** about the uses and trends.
- **Reduce digital gap** and guarantee that more children and teenagers reach technology.
- Promote a **safer, responsible** and also **productives** use of technology.
- **Expand the message** to all Latin American region.

Thanks
