

# SUPPORTING CHILDREN'S MENTAL HEALTH NEEDS

Children building capacities and researching

Asia and the Pacific: India

We reached our students personally at their homes and supported them with dry ration for their families and for their mental health we conducted online session especially for use of social media and gaming. They were stressed and frustrated as they had to be inside house only and not play outside due to social distancing. Secondly, female children were more at risk of abuse in various forms, hence regular visit at their home gave them moral support and assurance.
